## Comments

- Compared with last sprint, some improvement was made but we were still behind schedule in implementing all of our user stories.
- The reason we finished what seems to be many stories all at once is because many user stories needed to be integrated together and when we integrated all these stories, that was when we marked them as really being completed.
- It is important to note that we have designated IN-19 as spike since it required learning a new technology. Some time was taken to finish this user story and it took until the very end of the sprint in order to finish this.
- IN-7 was carried over from the last sprint and took until the end of the sprint to merge due to integration issues.
- A day prior to the sprint, the user stories related to messaging were merged and testing was completed.
- Again we had someone have a COVID-19 vaccine which stopped him from doing work for a few days during the start of the sprint
- Although we had some last day integrations we were able to finish all our story branches by the end of the sprint.
