Comments

- Compared with the last sprint, we did not make an improvement with our sprint velocity. We were behind schedule in implementing all of our stories throughout the whole sprint. This was because our group had decided to take on more stories that had a bigger workload. The features such as the discussion board system took the whole sprint to implement to our standards.
- We were not able to complete the story IN-7 (assignment deliverables). We decided as a group that this story is a lower priority with respect to the other stories in this sprint. We decided at the beginning of this sprint that we will get started on this feature and finish it only if time permits since we have over 5 features (7 total) this sprint.
- Also at the start of the sprint, we had a group member who had his second COVID-19 vaccine shot which stopped him from working on the project for a few days. Also we had complications, with many group members needing to spend time on other courses, which led to less work being done at the start.
- After finishing IN-16 we had a certain implementation we thought of as complete but during further discussion and reflection after completing the branch we actually wanted more features to be added such as visibility selection for posts so we had to reopen the branch to implement these new features.
- Even though we had delays in completing work at the start of the sprint, by the end we were still able to finish most of our story branches, with more time and work spent towards the end of the sprint.
