Comments
- **Compared to our previous burndown chart from Sprint 1, there is an apparent improvement in respect to following the guideline. This was quite noticeable in terms of organization and lack of any major last minute feature changes and/or bug fixes.**
- We were ahead of schedule half way during the sprint.
- While we fell behind sometimes, we managed to catch up in large chunks that were marked as complete in a short period of time. This may speak to a slight tendency to delay completion on Jira, which we can improve on to better reflect our pace.
- During the second half of the sprint, we slowed down on completing tasks due to us having further discussions on the specifics on implementing new features (video browser, and videos). There was also time dedicated to bringing everything together and fixing uncaught bugs after merging branches.
